"Why," began the officer, with a puzzied frown, "one of our prisoners claims to be Mrs. Green, but that is only an alias for 'Mother Farrel,' whose portrait is in the rogues' galtery. I recognized her at once."

"Who is your other prisoner?" I had pened at Huntingdon's island since I had left it.

"I'm afraid you have the wrong parties." I smiled as I thought of Lipton S. Clair's outraged dignity. "The tady really is Mrs. Green, and the gentleman is not Dan Maloney, but Mr. L. S. Clair, a well known literary man."

The revenue officer's face fell, then a suspicious look came into his eyes. How do I know that you are not one of the gang yourself and this is merely a trick to get us to release your pals? What was Mrs. Green doing over there anyway?"

"She was out in a small boat and was blown over there during the storm." Vida volunteered.

"Miss Green," the officer addressed her huskily, "I cannot refuse to take your word. I'll have the prisoners brought ashore, and if the lady is really your mother I shall be glad to release her instantly."

Vida did not correct his mistake, but asked, "How do you know I am Miss Green?

"Oh I'd know you anywhere," he bragged, smiling. "I've seen your photograph in the newspapers so often."

"Whit." Vida requested; "wait until after I bave identified her."

That was a wonderful inspiration on Vida's part. As the two women had never set eyes on each other before, Mrs. Green might not address Vida as her own offspring as soon as the power of speech was restored to her. "If you say she is your mother it is

In Herschel island, where the sun shines continuously for eight weeks in summer, the Eskimos had a sun dance, not always clothed in the garments of propriety. They had an idea that when the sun came back its movements were directed by an invisible power, but they had no tangible conception of a God. They had no belief in a future life, either of reward or punishment Today they are religious, truthful, kind to their children and to the aged. They are ambitious to learn; they are practical, extremely industrious, sanitary in their habits, well clothed and weil housed. Insanity is unknown, but tu-

berculosis is quite common. They whale in summer and trap in winter. They are clever in trading, good workers on land, water and ice, and take excellent care of their household effects. Tools, if broken, are neatly repaired. When at Herschei island or Fort McPherson they eat the white man's food with great relish. In summer they eat their fish and blubber raw and in winter frozen.

The Eskimos have no fear of death; f told that death is approaching they will respond with a complacent smile They are a very happy people. ## SWIM TEN FEET A SECOND

Interesting Facts Developed in Scientific Study of Habits of Fish.

The speed at which fish can swim is summarized by the Scientific American from recent studies as follows: "A Belgian authority, G. Denil, while studying fishways, concluded that salmon could swim at a speed of 3.15 meters a second for at least 14 meters. A Canadian, G. P. Napier, from investigations in the Frazer river, expressed the opinion that the limiting velocity of a stendy stream up which a sockeye salmon could swim a very short distance was between six and seven miles an hour. Finally, H. von Bayer of the United States bureau of fisheries declared that the velocity of the current in fishways should not exceed ten feet a second. These various figures, arrived at independently, are substan-

tially in agreement. From his own studies on fishways in Massachusetts Emerson Stringham found that a common species of alewife could swim for at least a few feet through water flowing about ten feet a second, about the limit for fishways."
